Term Paper Report

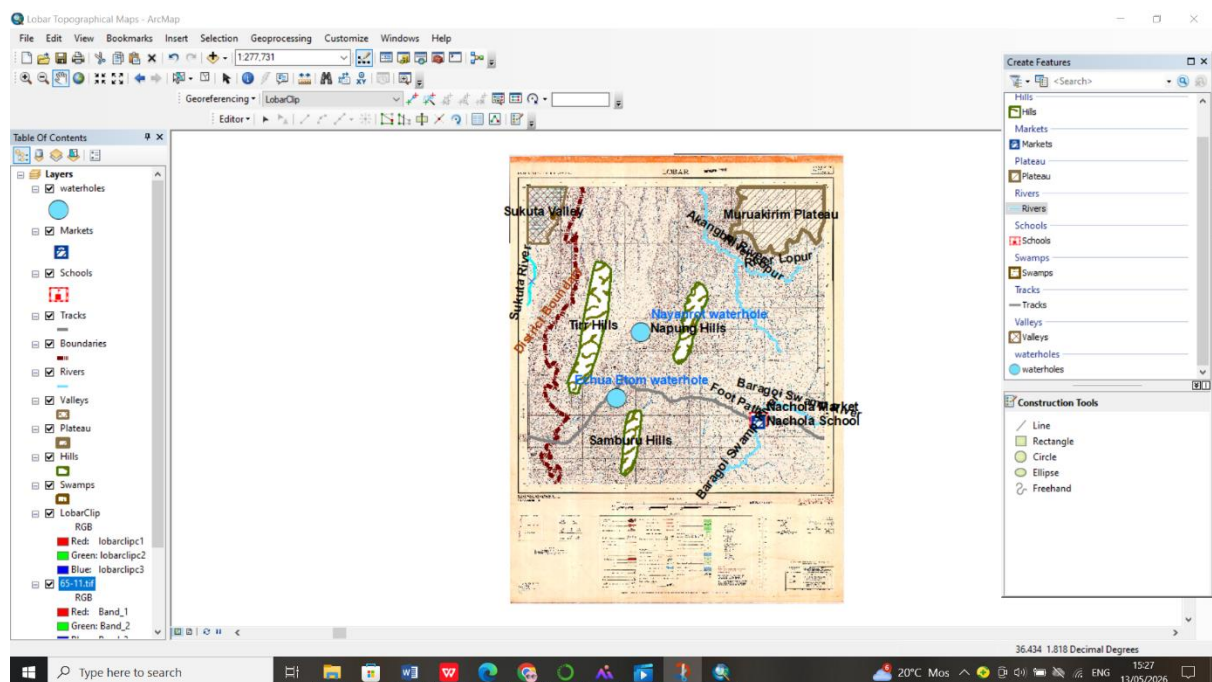

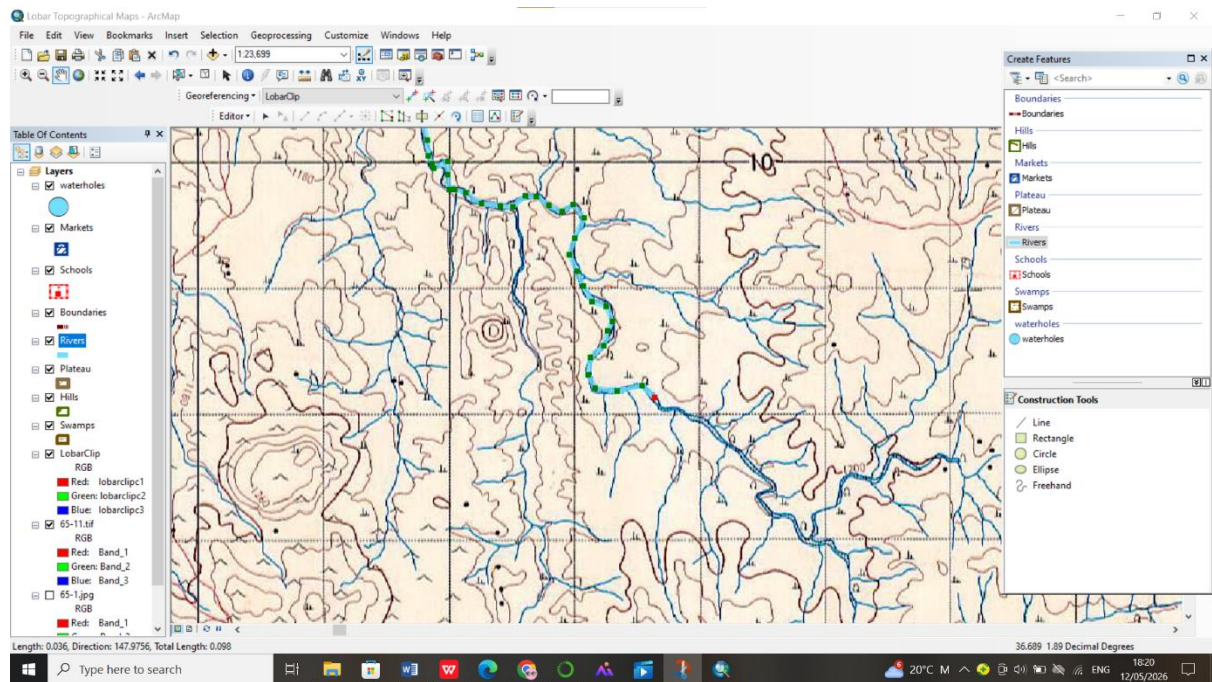

step 1:I first added data that is my assigned Topo sheet and created the other three folders; MXDs, Shapefiles and Final Maps .

Step 2:I then Georeferenced the map using the 4 control points in degrees after which I used the clipping tool to clip.

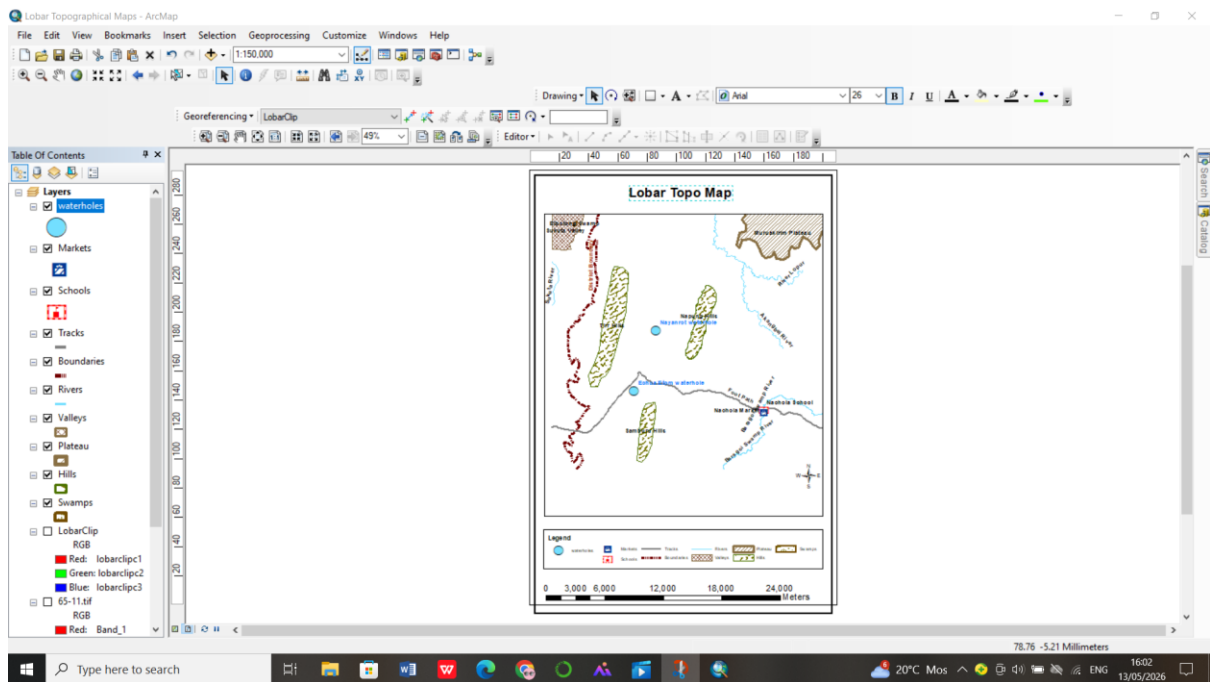

Step 3:Here I started adding shapefiles through Catalogue ,by adding New to Shapefiles, symbolizing and finally adding a field in the attribute table

Step 4: Once I created all shapefiles then I went ahead to edit the features ; that is the points ,the polylines and the polygons for each shapefile as well as adding labels through the attribute table and the properties feature.

Step 5:I finally had my topographical map which I added a title, legend ,scalebar, NorthArrow and a Neatline and exported the map as PDF.

Step 6: Finally, I did the buffer analysis for schools and rivers as required.
